1. AFPEx Setup Instructions for Windows

Note: The installation steps in this guide are based on a Windows 11 environment. Steps may differ slightly on other versions of Windows.

1.1. System Requirements

Recommended Hardware

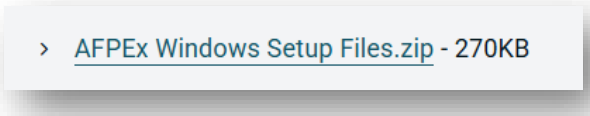

- Processor: Intel Pentium 4 or equivalent, or higher
- Memory: 1 GB or higher

Required Software

- **Java Runtime Environment (JRE):** Version 11 or newer
  - Freely available from various platforms, such as: https://www.azul.com/

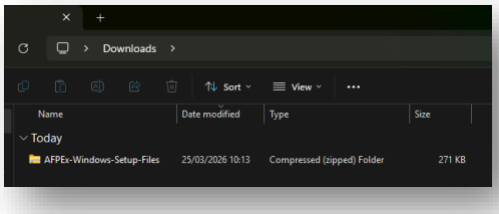

1.2. Install CADAS-ATS Terminal

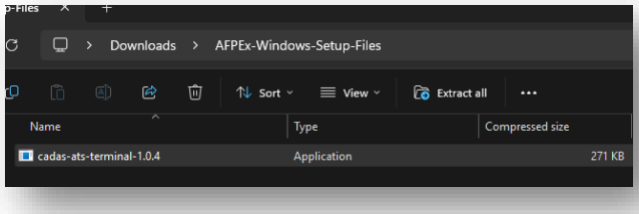

Navigate to https://www.nats.aero/do-it-online/afpex-guide/set-up-guide/, download the AFPEx Windows setup files by clicking on:

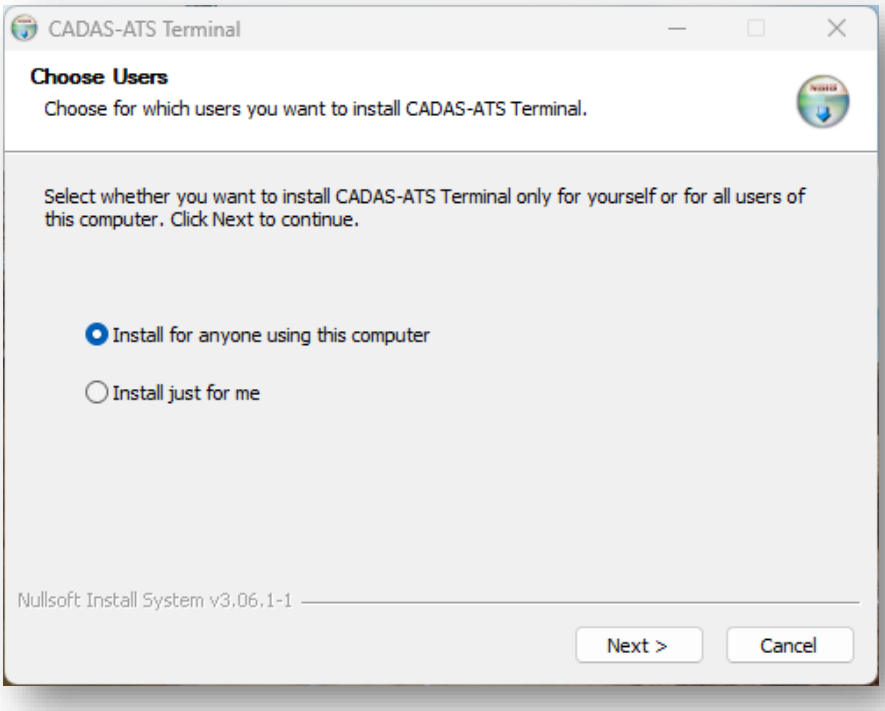

The compressed folder will be downloaded to your default download location. Open the folder and run the *cadas-ats-terminal* application to start the installation wizard.

Note: Microsoft Defender SmartScreen may try to prevent the installation file from running. If you wish to continue with the installation, select *More info* and then *Run anyway*.

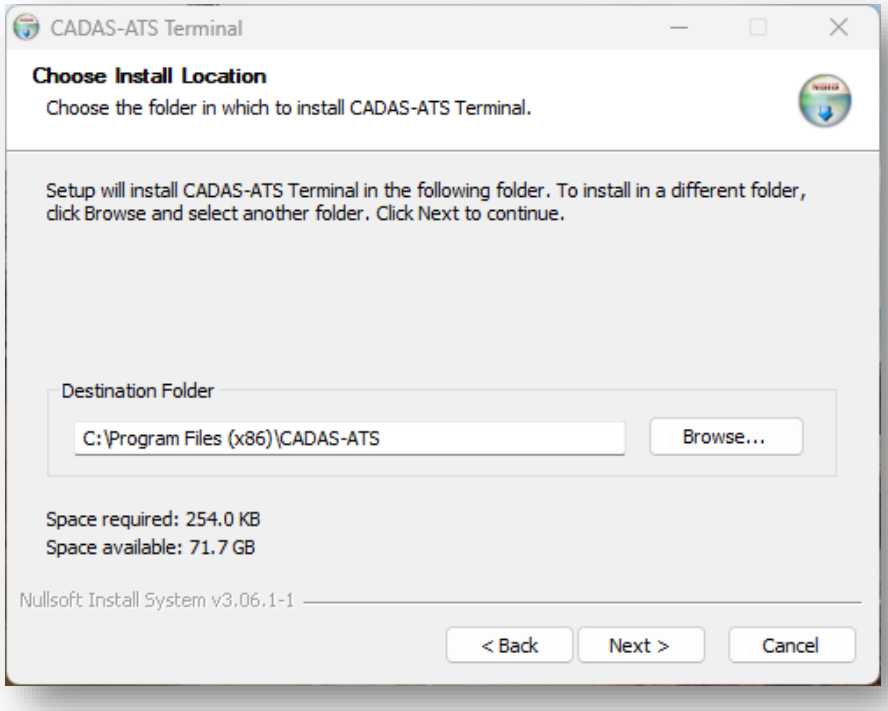

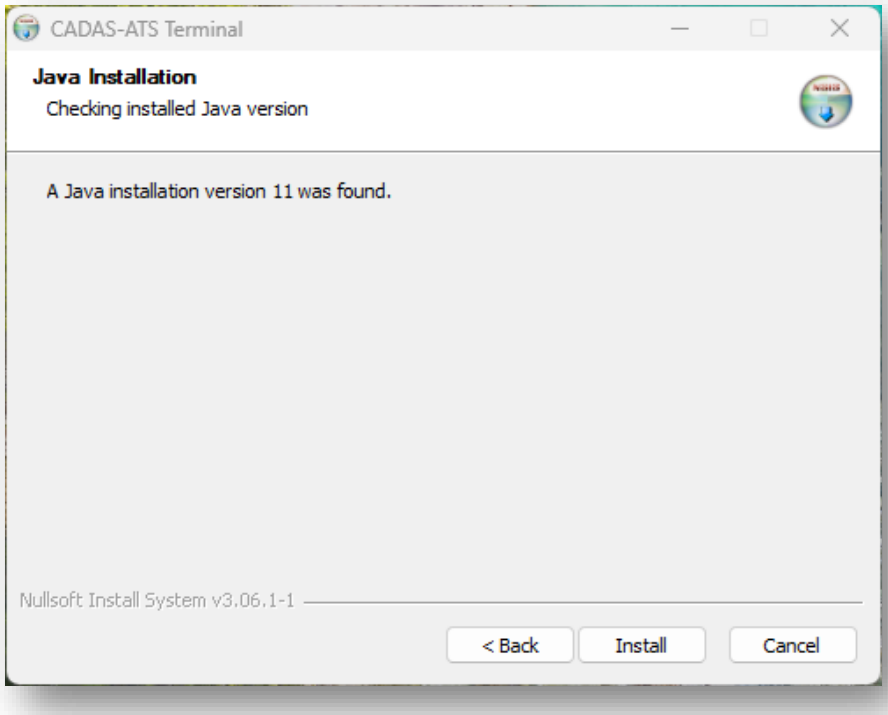

Select which users you want to install CADAS-ATS Terminal for, current or all users, and click next.

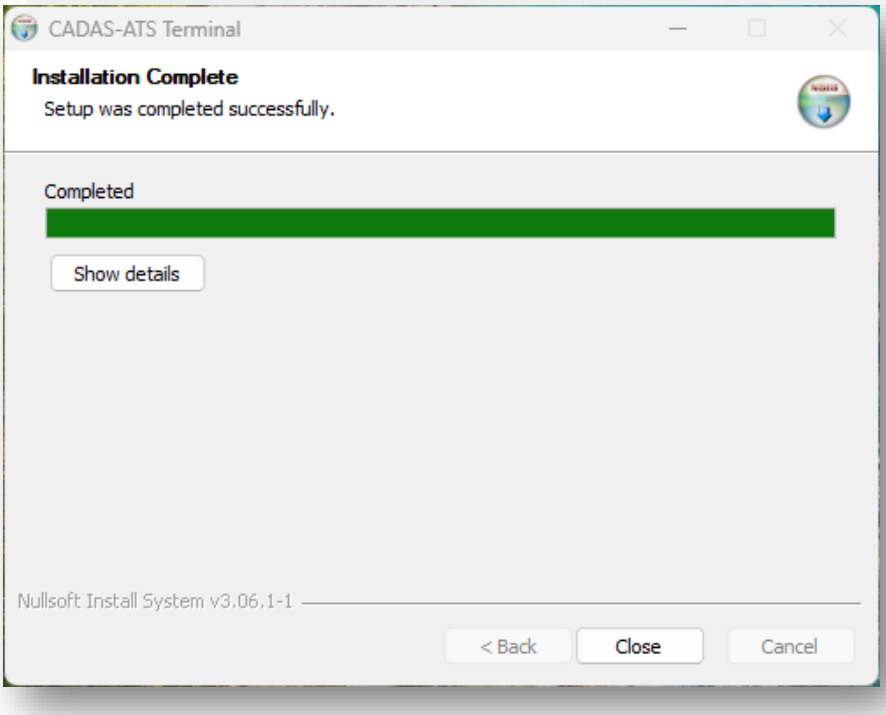

Choose the install location, you can leave as default or select browse and chose a new destination folder, then click next.

This page of the installation wizard always states Java installation version 11 was found, regardless of what version of Java is installed, or even if Java is not installed. Please see the System Requirements for more information on Java. Click Install to commence the installation.

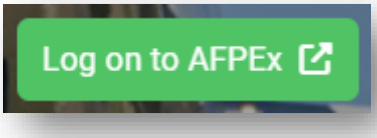

Once the installation has completed, click close.

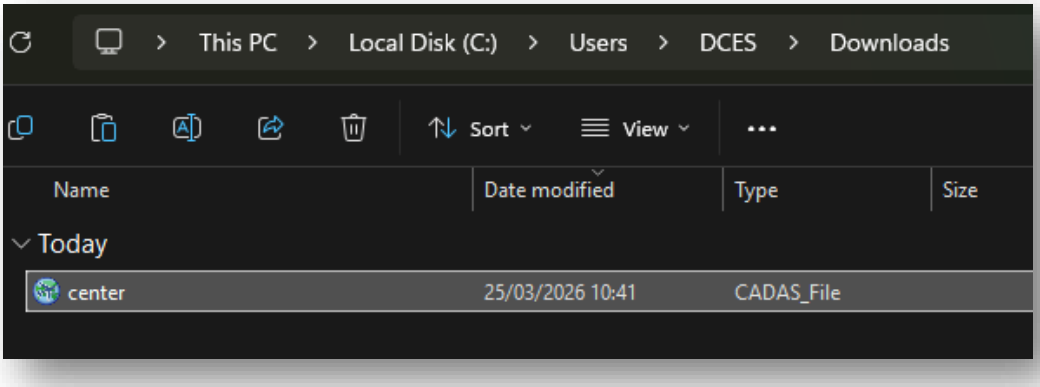

1.3. Download Center CADAS File

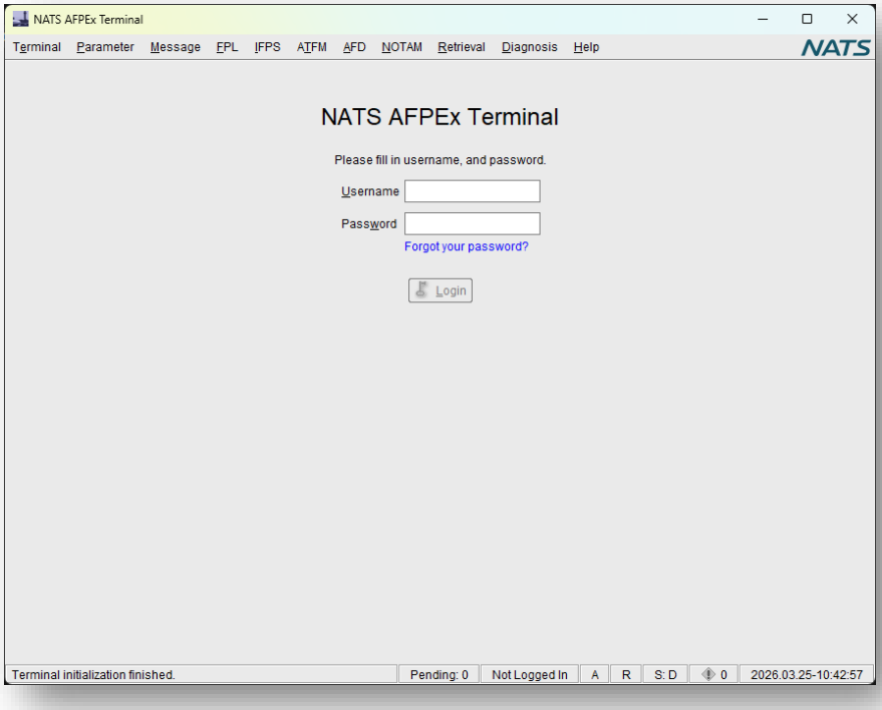

Navigate to https://www.nats.aero/do-it-online/afpex-guide/, download the AFPEx CADAS file by clicking on:

The file will be downloaded to your default download location. Double-click on the *center* CADAS file to start AFPEx.

The AFPEx Terminal will open, and you can log in using your account credentials.

Once setup, double-click on the center CADAS file to access AFPEx. It is recommended to move the center CADAS file to a more convenient location (for example, the Desktop).

2. Uninstall AFPEx

To uninstall/remove the AFPEx components:

- Delete the *center* CADAS file.
- Access Installed apps (Settings, Apps, Installed **apps**) and uninstall CADAS-ATS Terminal.
